

## 2023 Quality and Accountability Scorecard

This document presents the measures evaluated in the 2023 Vizient Quality and Accountability ranking. The scorecard provides a comparison of performance with that of other comprehensive academic medical centers. The data were obtained from existing Vizient data resources, including the Clinical Data Base (July 2022 – June 2023) and Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) data from vendor files, Core Measures Database, and National Healthcare Safety Network (April 2022 – March 2023).

The goal of the Quality and Accountability ranking is to assess organizational performance across a broad spectrum of high-priority dimensions of patient care. The 2023 scoring and ranking cover the domains of mortality, safety, effectiveness, patient centeredness, efficiency and equity using measures developed by national organizations or the federal government.
